Vodafone choose iNurse as their mobile patient management solution

iNurse from Advanced Health & Care has taken another giant leap forward, with the recent announcement that it will become the integral product of Vodafone's mHealth strategy.

Launched in July 2011, Vodafone's mHealth Professional range of solutions is designed to help healthcare workers better support patients and drive productivity. Vodafone UK is using its expertise in mobile technology and partnering with patient management specialists Advanced Health & Care, to support the healthcare sector to deliver better patient care more efficiently.

mHealth Professional is a suite of cost-effective, mobile and flexible working tools, services and applications that can be tailored to any healthcare specialism so that regardless of function, every healthcare worker can have the perfect blend of tools to do their job. At the heart of this is iNurse from Advanced Health & Care.

iNurse is a patient management system that enables community clinicians to record and communicate patient care information using either a Windows Mobile or Blackberry device. Integrating with existing community systems, Vodafone recognises that the implementation of iNurse can deliver huge efficiencies to many NHS trusts throughout the UK.

Patient information is sent directly and securely to the device and is automatically returned back

to the clinical system, dramatically reducing the duplication of effort. Travel and administration times are also reduced and each clinician saves a minimum of one hour per day.

What does this partnership mean for users?

Whilst iNurse is a semi connected application working with or without mobile signal, Vodafone's experience as a trusted partner of many health trusts throughout the UK and innovative approach is invaluable. Such a partnership ensures that health care workers can choose the best technology from the most supportive partners. Using products like iNurse, mean that mobile clinicians can be highly productive and are able to make better informed decisions at the point of care. Remote access to patient information and systems out in the field allows clinicians to spend more time with patients and enables them to work easily and effectively in their local communities.

To find out more about iNurse or learn more about how the partnership of Advanced Health & Care and Vodafone might help your trust increase efficiencies please contact us on 01233 722670.
